ABSTRACT OF THE DISCLOSURE

An e-brain is provided with a data structure of hierarchy knowledge map including several knowledge symbols, among which each knowledge symbol is a carrier symbol or conceptual symbol and has a unique addressing expression, with a syntagmatic chain existed between the up- and down-knowledge symbols thereof and a knowledge attribute table for recording one or more attributes each having an attribute name and an attribute value. The e-brain comprises one or more knowledge interpreters to interpret a knowledge instruction including a knowledge operator and one or more parameters, by which the attribute value is operated under a context determined by the carrier symbol.
